A TELEGRAM on buying pavement wisely

Unions paverment surfaces are especially made to prevent it, water enters.either by absorption or through tiny cracks. There, freezing, it expands and destroys—or couses chemical change.

Unless constructed to withstend contraction and expension, changes of heat and cold will crack up the surface—and traffic hammering

So parament must have the toughest possible wearing surface. Yet this auriace must be both resilient and completely waterproof. It must take up, without cracking, all expansion and contraction.

Paying brick, being vitrified, cannot absorb water. Laid with asphalt between bricks, water cannot get into or through the pavement surface, either. And paving brick does not change chemically; cannot soften under heat. It is easy to lay and get a first-class job. It is the toughest wearing surface man makes.

Thus, 20 to 35 years of service finds brick pavements all over America still coating almost nothing for maintenance, repairs, uplicep!

"The A.B. C. of Good Paving." a tempoyer's manual, tells in words and pictures how engineers today huild ever-wearing, low cost, brish surfaced roads and streets. Address pour request to National Taving Brish Manufacturers. Association, 332. South. Michigan Avenue. Chicogu.

Are you fighting against middle-age?

 $O^{\rm N1-OI}$ the most critical periods of a woman's life comes between 45 and 50. Most women dread the approach of middle-age because they know, only too well, the depressing ailments it brings

The best preparation for this period a woman can have is a good physical condition. Lydia E. Pinkham's Vegetable Compound will help her to gain strength and energy. It builds up the appetite and induces natural sleep. The following letters were written by women of middle-age.
